SKILLS

- Windows
- Mac
- Linux
- Ubuntu
- Amazon Web Services
- Raspberry Pi
- Machine learning
- Neural Networks
- Jenkins
- Docker
- Postman
- Python
- C++
- C#
- SQL
- Java
- JavaScript
- Vercel
- Solidity
- Web3.js
- CSS
- React
- .NET
- Spring Boot
- Flask
- R Language
- Matlab
- Assembly code
- Bash
- Excel (ICDL Certification)
- Word
- PowerPoint
- Outlook
- Teams
- Project Management
- Smart Contracts

As a BSc Computer Science student, I've consistently achieved a first-class (above 70%) throughout my first two years, highlighting my strong technical expertise and commitment to excellence. Proficient across multiple programming languages, I've thrived in both academic and professional settings, honing my project management skills and taking on leadership roles. I bring a positive and collaborative attitude to every team I join. Known for being approachable and friendly, I prioritise effective communication and teamwork, fostering a supportive and inclusive work environment. These experiences have equipped me to excel under pressure, ensuring my reliability as an employee.

EXPERIENCE

April 2023 - Current

LED Technician Techfront UK Ltd

- I have refined my expertise in handling electrical systems and understanding data transmission
- My experience includes working with LED advertisement boards, particularly those associated with sports such as football, rugby, and other major events
- This exposure has deepened my knowledge of hardware complexities and operations in dynamic environments.

March 2018 - Current

Media assistant Grandsinghmusic

- In my role overseeing promotion planning, I take charge of our social media presence and handle all booking inquiries received through our social media channels
- I've successfully grown our social media page from 2000 to 8000 followers organically within a few months, fostering a vibrant online community
- Additionally, in the realm of administration, I manage new client queries, facilitate deposit payments, and send reminders for outstanding balances
- On the operational side, I ensure seamless execution by setting up and overseeing photography/videography requirements, ensuring a smooth and professional experience for our clients.

September 2023 - September 2024

Software Engineer Northrop Grumman

- During my software engineering internship, I gained valuable real-world experience.
- I adapted to scrum processes and agile methodologies, collaborating effectively within a team environment.
- Participated in code reviews, completed tasks, and attended training opportunities to enhance technical and personal skills.
- Built user-friendly web applications from scratch.
- Implemented robust security protocols, safeguarding sensitive data against potential cyber threats.
- Wrote clean and dynamic code, leveraging expertise across multiple programming languages to meet diverse requirements.
- Performed software testing and diagnosis, supporting ongoing embedded system development.

PROJECTS

2022 First-Year Project: "Sending Bulk Email News to Subscribers"

Grade: 70%

- **Objective:** Developed a text-based system for managing email subscriptions, with data stored in a CSV file.
- **Technical Details:** Utilized Python and APIs to automate the process of sending bulk emails to subscribers.

2022 First-Year Group Project: "Creating a Text-Based Game"

Grade: 61%

- **Objective:** Designed a game where users drag and drop properties to generate resources and build a castle.
- **Technical Details:** Implemented the game in C++, incorporating the use of properties, pointers, and fundamental programming constructs.

2023 Second-Year Group Project: "Creating a School Website Service"

Grade: 80%

- **Objective:** Developed a school administration website for teachers to upload and grade students' work, improving the tracking of student progress.
- **Technical Details:** Built using Flask for the backend, leveraging cloud storage for teacher and student information.

2023/2024 Placement Project: "Creating a Home Security System/Game"

- **Objective:** Developed a dual-purpose home security system and a 2-player object-based battling game for the Cheltenham Science Festival. The system utilized a Raspberry Pi and Pi camera for motion detection, allowing users to access detection recordings on a website.
- **Technical Details:** Backend development was done with Spring Boot, and the frontend with React. Python was used for processing video recognitions triggered by motion detection. The game involved web scraping eBay for object prices, where higher-priced items inflicted more damage. Object detection was achieved using YOLOv8, with additional logic allowing certain objects to block others (e.g., a stop sign blocking a car).

EDUCATION

2025

Computer Science BSc

COVENTRY UNIVERSITY

- First Year Grade: 70%
- Second Year Grade: 74%
- Final Year Grade: TBC

06/2021

A Level

ST. PETERS COLLEGIATE SCHOOL

- Computing: Distinction
- Business: Distinction
- Psychology: C

06/2019

GCSE

ST. PETERS COLLEGIATE SCHOOL

- English Literature: 6
- English Language: 6
- Maths: 6
